Draft Overarching Principles of a Governance Framework

For a hospital without walls digital strategy

Overarching and prerequisite principles that can not be violated by any rule, process, decision or act and defines what should be prioritised by its contribution to strengthening the principles matrix

Purposeful	Trustworthy	Collaborative	Equitable	Valuable	Sustainable

Purposeful

Must enable the generation, flow, exchange & application of data to be meaningful within the context of underpinning any strategic aspirational outcomes including the notion of wellbeing, resilience & value. To enable any defined operational goals set by MSH including effectiveness, efficiency & any other stated requirement

Must facilitate a high level of re-usability providing a single point of truth to enable comprehension from the consumer/patient perspective to foster problem solving and sense-making

Must enable the role of a custodian of the informed consent to access and use any type of nominated asset for the common good

Trustworthy

Must facilitate the conditions & functions to be predictable, fair, transparent, accountable, safe, secure, enforceable and minimize harm.

Must be able to demonstrate compliance with all stated laws, regulations, industry standards, busines rules and any consenting agreements relating to any given digital procedure or automated process as determined to be required and specified by MSH, and demonstrate harmonization with other jurisdictions & demonstrate equal enhancements in regard to safety

Must enable the exchange of data to operate in a state of non-repudiation to enable the automation of any risk-based process or procedure regardless of any type of human intervention

Collaborative

Must foster a culture of collaboration to a point where sharing & exchanging data, information & knowledge becomes the preferred first choice.

Must share before buy & buy before build & acquire once to use many
Seek consenting agreements granting rights to use digital assets for the public good where MSH acts as the trusted custodian

Must exploit the emerging potential of data altruism that can be made available voluntarily by informed consenting agreements for the common good of the MSH region

Equitable

Must enable equal access to data, knowledge (of what works), knowhow & experience to enable grater level of informed decision making

Must seek to establish, respect & enforce these principles and any other set of digital rights that MSH regard as required to protect people from any harm or exploitation from the re-use of their data

Must strengthen the notion of a public health service providing unbiased non-prejudicial access to digital knowledge

Valuable

Must develop the capacity to determine the worth (equation) of any solution set that includes the personal investment made by people/families, determine if the specified (claimed or assumed) benefits of the solution set contributed to meeting their personal needs, and the value impact of the benefits on their lives

Must be able to unlock existing identified value potential, generate new types of value from the fusion of digital information & services and create new digital intellectual property and algorithms that are recognized by credit rating criteria

Must demonstrate capacity to utilize the combined regional value to enable benchmarking, operational KPIs in a manner that can be incorporated into new types of Public, Private, Regional (and even including crowds) partnerships

Sustainable

Must increase accessibility, affordability, accountability, greater self reliance & resilience to shock.

Must unlock & use digital assets & utilize & offset the costs of service delivery for MSH to preserve & strengthen the notion a public health service

Must
